

Technical SEO Checklist

Every item below is implemented on the live demo page — verify by viewing source.

✓ **LocalBusiness + FAQPage schema**

JSON-LD, valid against schema.org — check with Google's Rich Results Test.

✓ **Unique title & meta description**

Written for this page specifically, not templated boilerplate.

✓ **Open Graph + Twitter Card tags**

Controls how the page previews when shared on social platforms.

✓ **Canonical URL**

Prevents duplicate-content splitting across URL variants (www, trailing slash, etc).

✓ **Single H1, ordered heading hierarchy**

One topic per page; sections nest logically beneath it (H2 > H3).

✓ **Semantic HTML5 landmarks**

header / main / section / footer used correctly, not generic div soup.

✓ **sitemap.xml + robots.txt**

Both present at the domain root; sitemap referenced inside robots.txt.

✓ **No render-blocking layout shift**

Fonts preconnected; animation uses transform/opacity only (no CLS penalty).

Demo build by Glodigs — Verdant Landscaping is a fictional business created to demonstrate technical SEO implementation, not a real company.
